Re: Application for the position of Backend Developer

Dear Sir/Madam

I would like to apply for the position of Backend Developer as advertised on Infarm's job website. I have extensive experience in software development with technologies such as Java, .Net, and Python. I have great experience with databases such as SQL Server, PostgreSQL, and MySQL, as well as being very knowledgeable with JavaScript and modern frameworks like React JS.

I received my master's qualification in Software Engineering from Innopolis University, Kazan, and have over six years of experience in software development. In my current role at GexpoTech, I am responsible for product development and management, as well as developing innovative solutions across a variety of software platforms. In a recent project started in January of this year, I have designed and developed user-friendly websites for multiple charity organizations, and trained over 10 client members in internal web functions. In 2019, I led the development of a bulk sms system for Alchemy Marketing and was responsible for the successful migration of all client content from our legacy system to the new platform.

During my time at MRCG at LSHTM, I was responsible for developing and maintaining MRCG's workflow management system for their internal processes. I also developed and managed MRCG's Library Management System, and Publication Reporting System.

I am greatly impressed with the company's growth and the services they provide. Having worked with home gardens and growing fresh vegetables when I was young, and living with my dad, the work of Infarm does indeed resonate with me. It is something I would be happy to be part of and help grow further and achieve its goals. I believe that my experience with software development, and backend engineering would be of great benefit to Infarm.

Please find my CV attached. Feel free to contact me if you have any further questions you would like to discuss.

Thank you for taking the time to consider my application. I look forward to hearing from you.

Sincerely,

Abdoulie Kassama
